In re Application of: Sundararajan et al. Atty Docket No.: INTEL1480-2 (P13833X)

Application No.: 10/705,389 Filed: November 10, 2003

Page 2

## Amendments to the Claims

Please amend claims 1, 5, 6, 15, 16, and 20 as indicated in the listing of claims.

Please cancel claims 2, 3 and 21 without prejudice or disclaimer.

The listing of claims will replace all prior versions, and listings of claims in the application

## **Listing of Claims:**

- Claim 1. (Currently Amended) A method comprising:
  - attaching one or more template nucleic acid molecules to one or more structures; a)
  - b) synthesizing one or more complementary nucleic acids from labeled nucleotides;
  - detecting changes in a surface stress property of the structures; c)
  - identifying the incorporated nucleotides from the changes in a the surface stress d) property of the structures; and
  - determining the sequence of the template nucleic acid. e)
- Claim 2. (Currently Cancelled)
- Claim 3. (Currently Cancelled)
- Claim 4. (Original) The method of claim 1 wherein the structures are cantilevers.
- Claim 5. (Currently Amended) The method of claim 1, wherein the changes in a the surface stress property of the structures are detected by optical beam detection, piezoelectric detection, piezoresistance detection or electrical resistance detection.

**PATENT**

Sundararajan et al. Application No.: 10/705,389 Filed: November 10, 2003

In re Application of:

- Claim 6. (Currently Amended) The method of claim 1, wherein the changes in the surface stress property of the structures are detected by changes in the resonant frequency of the structures or in the resistance of an electrical circuit associated with the structure.
- Claim 7. (Original) The method of claim 1, wherein the labeled nucleotides comprise at least one mass labeling group.
- Claim 8. (Original) The method of claim 7, wherein each different type of nucleotide comprises a distinguishable mass labeling group.
- Claim 9. (Original) The method of claim 7, wherein the mass labeling groups are selected from the group consisting of nanoparticles, nanoparticle aggregates, carbon nanotubes, fullerenes, functionalized fullerenes, quantum dots, dendrimers, organic molecules, polymers, heavy atoms, fluorescent labels, luminescent labels and mass spectroscopic labels.
- Claim 10. (Original) The method of claim 1, further comprising hybridizing primers to the template nucleic acids.
- Claim 11. (Original) The method of claim 10, wherein the labeled nucleotides are covalently attached to the 3' end of the primer by a polymerase.
- Claim 12. (Original) The method of claim 1, wherein the template nucleic acid molecules are arranged on part of the surface of the structures in a selected pattern.
- Claim 13. (Original) The method of claim 1, wherein only a single type of nucleotide is exposed to the template and complementary nucleic acids at one time.
- Claim 14. (Original) The method of claim 8, wherein four different types of nucleotides are exposed to the template and complementary nucleic acids at the same time.
- Claim 15. (Currently Amended) A method for nucleic acid analysis comprising:

**PATENT** 

In re Application of: Sundararajan et al. Atty Docket No.: INTEL1480-2 (P13833X)

Application No.: 10/705,389 'Filed: November 10, 2003

- attaching at least one template nucleic acid to one or more structures; a)
- synthesizing at least one complementary nucleic acid segment comprising a selected b) number of labeled nucleotides;
- detecting changes in a surface stress property of the structures upon incorporation of c) the labeled nucleotides; and
- d) determining the sequence of the nucleic acid segment from the changes in the surface stress\_property of the structures.
- (Currently Amended) The method of claim 15, further comprising: Claim 16.
  - e) replacing the labeled nucleotides in the complementary nucleic acid segment with unlabeled nucleotides;
  - · f) synthesizing an adjacent complementary nucleic acid segment comprising a selected number of labeled nucleotides;
  - detecting changes in a surface stress property of the structures upon incorporation of g) the labeled nucleotides; and
  - determining the sequence of the adjacent complementary nucleic acid segment. h)
- (Original) The method of claim 16, further comprising repeating (e) through (h) until Claim 17. a nucleic acid sequence is obtained.
- (Original) The method of claim 16, wherein the labeled nucleotides are replaced with Claim 18. unlabeled nucleotides by removing the labels from the labeled nucleotides.
- Claim 19. (Original) The method of claim 15, wherein the structures are cantilevers.

In re Application of: Atty Docket No.: INTEL1480-2 (P13833X) Sundararajan et al.

Application No.: 10/705,389 Filed: November 10, 2003

- (Currently Amended) The method of claim 19, wherein the change in the surface Claim 20. stress property of the structures is determined by detecting a deflection of the cantilevers, a resonant frequency of the cantilevers or the resistance of an electrical circuit associated with the cantilevers.
- (Currently Cancelled) Claim 21.
- (Original) The method of claim 20, wherein a deflection of the cantilevers, a shift in Claim 22. the resonant frequency of the cantilevers or a change in the resistance of an electrical circuit associated with the cantilevers is a function of the surface stress of the cantilever.
- (Original) The method of claim 15, wherein the template nucleic acids are arranged Claim 23. on part of the surface of the structures in a selected pattern.
- (Original) An apparatus comprising: Claim 24.
  - an analysis chamber containing one or more structures; a)
  - one or more reagent reservoirs in fluid communication with the analysis chamber; b)
  - a detection unit operably coupled to the structures; and c)
  - a data processing and control unit. d)
- (Original) The apparatus of claim 24, further comprising one or more nucleic acids Claim 25. attached to the structures.
- (Original) The apparatus of claim 25, further comprising one or more polymerases in Claim 26. the analysis chamber.
- (Original) The apparatus of claim 24, wherein the structures are cantilevers. Claim 27.

**PATENT**

Application No.: 10/705,389 ·Filed: November 10, 2003

- (Original) The apparatus of claim 24, wherein the detection unit comprises a position Claim 28. sensitive photodetector, a piezoelectric detector or a piezoresistor.
- (Original) The apparatus of claim 24, wherein the detection unit comprises a laser. Claim 29.
- (Original) The apparatus of claim 25, said detection unit to detect changes in mass of Claim 30. nucleic acids attached to said structures and/or the surface stress of said structures.
- Claim 31. (Original) An apparatus comprising:
  - an analysis chamber containing at least one cantilever; a)
  - one or more nucleic acids molecules attached to the at least one cantilever; b)
  - a detection unit to detect deflection of the at least one cantilever; and c)
  - a data processing and control unit. d)
- (Original) The apparatus of claim 31, further comprising an information processing Claim 32. and control system.
- (Original) The apparatus of claim 32, wherein the information processing and control Claim 33. system is a computer.
- (Original) The apparatus of claim 31, wherein the detection unit comprises a laser Claim 34. and a position sensitive photodetector.
- (Original) The apparatus of claim 31, wherein the detection unit comprises a Claim 35. piezoelectric detector, a piezoresistive detector or a piezomagnetic detector.
- (Original) The apparatus of claim 31, wherein the nucleic acids molecules comprise a Claim 36. template from about 10 to approximately 100, 000 nucleotides in length.

In re Application of: Atty Docket No.: INTEL1480-2 (P13833X) Sundararajan et al.

Application No.: 10/705,389 Filed: November 10, 2003

- (Original) The apparatus of claim 31, further comprising an array of cantilevers, each Claim 37. associated with the same molecule.
- (Original) The apparatus of claim 31, further comprising an array of cantilevers, each Claim 38. associated with a different molecule.
- Claim 39. (Original) An apparatus comprising:
  - an analysis chamber containing at least one cantilever; a)
  - one or more nucleic acids molecules attached to the at least one cantilever; b)
  - a piezoresistive resistor embedded at the fixed end of at least one cantilever; c)
  - a detection unit to detect deflection of the at least one cantilever; and d)
  - a data processing and control unit. e)
- (Original) The apparatus of claim 39, further comprising a resistance measuring Claim 40. device.
- (Original) The apparatus of claim 39, wherein the nucleic acids molecules comprise a Claim 41. template from about 10 to approximately 100, 000 nucleotides in length.
- (Original) An apparatus comprising: Claim 42.
  - an analysis chamber containing at least one cantilever; a)
  - the at least one cantilever coated with a substance; b)
  - one or more nucleic acids molecules associated with the at least one cantilever; c)
  - d) one or more polymerases in the analysis chamber;

In re Application of: Atty Docket No.: INTEL1480-2 (P13833X) Sundararajan et al.

Application No.: 10/705,389 · Filed: November 10, 2003

- a detection unit to detect deflection of the at least one cantilever; and e)
- a data processing and control unit. f)
- (Original) The apparatus of claim 42, wherein the substance comprises an alloy. Claim 43.
- (Original) The apparatus of claim 43, wherein the alloy is gold. Claim 44.
- Claim 45. (Original) The apparatus of claim 41, wherein the nucleic acids molecules are anchored to the cantilever through a thiol group.
